PETITION TO THE UNITED NATIONS:

PETITION: "That the world's governments approved and instrument Green Solidarity Fund 2% of global GDP annually, for an immediate end to hunger, extreme poverty and global warming across the Earth and implement the Eco Planetary system of government under Global Digital Direct Democracy as a universal law decreeing mandatory by UN saving the planet. "

DRAFT

Eco Government Planetarium: United Nations implemented through the system of Digital Direct Democracy a referendum for the creation of a Planetary coalition government, for whose approval will have the vote of 50% plus one vote of all citizens of the world enabled.

Such centralized government will incumbencies on global issues such as climate change, environmental disasters, vital and strategic natural resources, disease, hunger, extreme poverty, wars, human trafficking, the defense of universal human rights , combating drug trafficking, terrorism and corruption.

It will have a budget equivalent to 2% of global GDP annually. The planetary president will mandate for four years and may be reelected for a second term. Parliament shall consist of all citizens of the world through Direct Digital Democracy, advised by a Science Council, composed of scientists.

The planetary government as priority mission will end hunger, extreme poverty, overpopulation and limit stop global warming in the short term.

OBJECTIVES

With 2% of global GDP, annually, it will be able to:

1. Abolish the extreme poverty in all the earth, forever
2. No more no child dies of hunger and preventable diseases.
3. flourish forest, 20 billion trees will be planted.
4. stop polluting technology to be renewed.
5. The fleet will be replaced by other hydrogen.
6. alternative energy be developed in replacement of oil and coal.
7. oceans decontaminated.
8. Amazonia is saved.
9. overpopulation is limited.
10. There will be heading for environmental disaster.
11. combat terrorism.
12. It will combat international drug trafficking.
13. Organized crime and corruption are desarticulará.
14. ecosystems will be preserved.

MASTER PLAN PRIORITIES

SOLIDARITY FUND 2% of GDP

2,139,439.4 million U \$ S

Initiative of Solidarity Fund 2% of global GDP, annually, for an immediate end to hunger, extreme poverty, overpopulation and global warming, is like clockwork gear that is assembled on the heart of the world and it drives towards a new era of greater balance and Sustainable Development. Its implementation depends solely on the individual support that each person is able to give. It responds to a very concrete need and is a rational equation to reorganize the planet's resources, enclosing the promise of a better future for all.

1. LIMIT overpopulation: 1 child per family

The problem of pollution and global warming is a derivative that more and more human beings on the planet are. In 2050 we will be 12,000 million and in 2100, 18,000 and we need that time almost equivalent to the natural resources of six planets to feed

our voracious civilization. If the natural growth rate of population was maintained at 2% per annum, as happened in the 80's of last century by 2050 we would be 15,000 million and by 2100, 30 billion, while for 2840 would reach 14745.6 billion human beings. Humanity then colonize need more than 1 million exoplanets to survive. Long before that happens, as the inhabitants of Easter Island, we will cut all the forest and killed all the animals and fish, so we are left without food to eat. The contradiction will have high technology and a packet of rice worth \$ 1 million. Does the preventive solution? Do in all countries and in China: one child per family and penalize violations. This must be understood. And overpopulation today consumes resources equivalent to a year and a half planet. Earth can sustain 5,000 million, we have an excess of 2,000 million. We proceed to balance the demand of consumption of vital resources in a coherent and long term.

2. plant 20 billion trees

They may be planted 20 billion new trees and then proceed to bury the logs, trapping the CO₂ and returning the greenhouse gas underground and proceeding to an intelligent control of global climate, by regulating the free carbon dioxide in the atmosphere . By greening the world's forests. The task is done by the multinational AEON of Japan with expertise in forest restoration, not to repeat the mistakes made with green credits. Global warming is becoming new forest areas suitable for frozen deserts of Northern Canada and Siberia, so it does not invade agricultural areas in the development of this project.

3. CHANGE ALL THE PARK AUTOMOTIVE

Also, they will have the games to take a historic decision, change the entire fleet and move to the hydrogen fuel engines and electric, leaving polluting the environment. There will be sufficient funding for this.

4. fusion reactors and Clean Energy

Progress is being made in the technology of compact fusion reactors. Counting on increased investment will be more rapid progress and may have abundant energy to replace thermal energy power stations that operate on the basis of oil and coal. This replacement reserves will allow the important petrochemical industry can last 500 years and not only until 2050 when the wells are exhausted. Also they intensify investments in so-called clean energy (wind and solar).

5. END HUNGER, extreme poverty and preventable deaths

With an annual budget of U \$ S 500 billion a year will be possible to eradicate hunger forever, now plagues 800 million, to avoid the deaths of 17,000 children per day, or 6.3 million per year because of malnutrition and lack of adequate and end the punishment of extreme poverty vaccination. All the inhabitants of the planet have the right to a decent life.

6. CREATION OF GREEN HELMETS

Along with the advent of the Planetary Government will proceed to the creation of the peacekeeping force to intervene Green Helmets internationally on environmental issues. The major environmental reserves on Earth will of national jurisdiction to planetary, as the case of Amazonia and the large reserves of drinking water. Strategic resources are property of humanity and not the countries, being managed by a presidential coalition government.

7. UNICEF PRIVATE

Kofi Annan reported to the UN and UNICEF are deficient organizations, consumed by administrative costs 40% of the resources entering it. This means that of 10 people to be helped 4 die on the way. To correct this Private UNICEF will be created under an equation of administrative efficiency at a cost of 20% and be invited to preside over the first year the lady Angelina Jolie.

8. TWO LANGUAGES

By a simple political decision can all communicate through a second language, using in practice already it adopted English as an international language. If the measure is implemented within five years, all the inhabitants of Earth can speak the same second language.

9. DIGITAL DIRECT DEMOCRACY

Today digital technology allows us to move towards modern forms of Digital Direct Democracy for an integrated Scientific Committee Advisory Board. Electronic voting can be channeled through e-mails from loyal numbers identity, protected by three key inviolable security.

Thanks to the advancement in modern digital technologies is possible to move towards forms of direct democracy. This will end the era of political parties and corruption in the system of power.

The e-mails can evolve to support the electronic vote and the new mode can be financed if mail accounts are paid in principle from a dollar per month.

Emails must fidelizarse with the document number of each person. This will generate a cost and therefore the price of a dollar per month, which may be temporary. The giant Google may be conducting the pilot in the United States, ideal for experimentally develop direct digital democracy country.

No longer exist legislators or representatives of the people. This the vote directly the laws, members of the executive, police, military and judiciary, and will be previously advised by a Science Council. Also by direct vote they will be deposed from their functions irresponsible or corrupt officials.

Absolute power vested in Parliament, consisting of all the people who have access to electronic voting by Internet.

By law, media amend its contents, devoting 80% of them to training in science and art of users and the other 20% will be dedicated to entertainment. In the knowledge society, emergent, you will eventually have a concept of fundamental value and be educated not to be squandered on banalities. Mediocrity will be seen as the worst possible disease.

The change will be so dramatic that the new mentality and new freedoms, observe the previous era as a period of darkness and slavery.

10. Impersonate MONEY

Money is an abstract convention which represents the work or human energy. By goodwill it can accumulate interest on capital and thus multiply the money. Within a cyber society, money can be replaced directly by the actual value, or the qualified time. This will eliminate the poor and millionaires while universalizing a middle class high standard of quality of life.

Enable electronic media devices such as cell phones, which can be used in bracelets or augmented reality glasses, serve as support for snapshots transactions.

The most creative individuals in society, will be those who will accumulate more credit and enjoy greater access to the various services. awareness will be awarded and there will be no more need to do business. With no more money, it will cease to be the main goal to accumulate. The new objectives will be patron of scientific and artistic merits.

All policyholders will have basic needs, according to their universal rights. Qualified for the provision of their community, time is an additional afforded them access to a higher level of assets. Recall that the workforce has been replaced by robots and artificial intelligence, in all repetitive tasks.

In turn, in the restructuring of world society, every citizen at birth shall enjoy the following rights guaranteed:

- Total access to health
- Total access to healthy food
- Total free access to education

- Total access to decent housing
- Total access to decent work
- Total government access to digitized

11. PLANETARY PRESIDENT

☐ one President

☐ Parliament 1

☐ 1 Economics

☐ one system to replace the money

☐ 1 Army

☐ 1 Constitution

☐ 1 Frontera

☐ 1 Integrating Consensus Total

☐ 2 Languages

☒ Abolition of Extreme Poverty

☒ Birth Control

United Nations is an inefficient organization to the needs of today's world. A planetary government is required under a presidential form of executive. With renewable term of four years.

And the provinces do not enjoy absolute sovereign power within the new world organization, not all states have sovereign power, because there will be a new supranational structure that will become part.

This transfer of rights will naturally resisted by the factors of power who benefit from the current status quo, but evolution of history could never be stopped by the interests of minorities.

The integration of the World Parliament is directly with all citizens, using this digital technology.

In principle the president will planetary limited to global problems such as hunger, global warming, drug trafficking, environmental disasters etc., and will command the force of the Green Helmets concerns.

12. items for environmental disasters

They have a fund of \$ S 250 billion for environmental disasters and stocks of food, tents, mattresses and other items for use by refugees on every continent will be stored.

13. Habeas DATA

the giants of the software will be hired - Google and Microsoft in order to develop a system enabling online monitoring of every penny, since it is allocated or donated to its final destination. Any web user can track. Using a more advanced stage of the system will be possible to manipulate the Big Data to combat drug trafficking and organized corruption through centralized planetary administration.

14. decontaminated OCEAN FISHING AND BE SAVED

coastal cities will be financed not to pollute the sea. Stringent controls on ships not littering and controls over fishing grounds shall maximize marine life to be renewed, with the support of the naval forces of each coastal country will be imposed.

APPLICATION OF FUNDS

\$ 500 billion U S / year to eradicate hunger, disease and alleviating extreme poverty.

100 billion U \$ S / year to plant 20 billion trees and logs capture CO2 and regulate climate.

250 billion U \$ S urgently to accelerate the development of fusion reactors and replace today's energy matrix based on oil and coal.

\$ 100 billion U S / year to decontaminate the oceans and fish stocks recover.

\$ 3 billion U S / year to develop technology for diverting asteroids that could impact Earth.

\$ Billion U S / year for the development of warp drive ship NASA

A billion U \$ S / year to finance Army Planetarium replace national.

The brink

The technology to produce food is unlimited. To the extent that overcrowding will continue to increase a shortage of food. All this, with agrochemicals are degrading the fragile layer of humus on which we depend for crops. And sea level overfishing has depleted all fishing grounds in the world. The future horizon that is shaping up to 2050, when we are 12 billion widespread famine is permanent unless we apply intelligent preventive measures now. And the outlook for 2100, with 18 billion still get much worse Just as we can not fail to act.

We cut the surface of Scotland per year. Amazon loses 18,000 hectares per hour, and when it becomes steppe, the CO₂ content in their trunks raise the average temperature 1. The huge deposits of submarine gas hydrates in the Arctic Ocean methane sufficient, when released into the atmosphere, for global temperature rise 6th and 12th at the poles, initiating a process of global thaw, a sea level rise of 80 meters. The entire peninsula of Florida in the United States, along with NASA and Miami, will disappear. The cities

Coastal be under water, along with its industrial parks and ports, will be more than a billion simultaneous environmental refugees. Civilization and technology recede by lack of inputs. They shortage of food and drinking water. Methane is 30 times more efficient to cause the greenhouse effect. And it is already bubbling methane in Arctic submarine, the unstoppable feedback has begun and will accelerate as long as the temperature continues to rise. We have reached 400 ppm CO₂ and when we break the 450 barrier will have 2nd most global temperature. Are we or not Planetary Emergency?

Hunger, extreme poverty, overpopulation, global warming, pollution, environmental disasters, drug trafficking, corruption, beyond the capacity of existing national organizations. A new model is needed to meet the demands of global emergency on

the planet. This Master Plan is a first attempt geared to that end. In all respects it is insufficient simply to limit carbon emissions. It is necessary and urgent to reorganize the resources and structures integrally planet. The diagnosis is that our civilization today as it is no longer suitable to continue therefore be adjusted, refined and change. Move to another model of organization. And where possible make the transition in the shortest period before beginning the natural feedbacks such as the release of submarine methane deposits.

¿Planetary emergency?

"If humanity wishes to preserve a planet similar to that on which civilization developed and to which life on Earth is adapted, paleoclimate evidence and ongoing climate change suggest that [the current levels of] CO₂ will have to be reduced to a maximum of 350 ppm. "

Dr. James Hansen

Prevent the temperature from rising two degrees Celsius more is not enough, concluded Dr. James Hansen, climate expert and former NASA scientist change. As explained in their study published in the journal European Geoscience Union, 1 degree over global warming could be catastrophic for humanity, because in just 50 years, the sea level will rise 3-8 meters.

* This report, once collated and confirmed by the scientific community, changes the picture of the situation on climate change and puts us in planetary emergency since we are close to reach 1 over global average temperature. Hence the need for extreme measures such as emergency and intensive Solidarity Fund 2% of world GDP and Eco Government Planetarium.

FOUNDATIONS

There will be no fundamental solutions to global problems unfunded capital intensive. This project will have 500 billion U \$ S to come to the aid of the 17,000 children a day die of hunger and lack of proper vaccination and the 800 million hungry and alleviate extreme poverty across the planet entering a new era of social justice throughout the world.

Both the UN and NASA consistent reports predict the collapse of our civilization by 2050 unless it changes the political and socioeconomic system. It is not enough simply to limit carbon emissions. We must make a revolution on the entire mechanism of production and consumption. For this fund required capital intensive. Ie 2% of GDP,

provided by all countries of the world to solve the great common scourges, given that they are already out of control and we have a picture of "planetary emergency".

TABLE OF SITUATION

During 2014, 300 billionaires have \$ 3.7 trillion, more than 3,500 million people who fail among all 2.2 billion.

According to UNICEF those with less spread over only 2% of global GDP.

According to Oxfam America and the EU they consumed 9.2 billion because of the crisis of toxic loans, financing banks. With these funds the world had not been hungry for 300 years.

Today 1% of the population accounts for 50% of global wealth.

By 2030 there will be 9,000 million people, will consume 50% more oil and energy, you will need to produce 30% more food, and likewise water, pollution will have risen to 440 ppm CO₂ and temperature 1, we will cut as much as the size of France, it will have lost 50% of species, fisheries depleted and will need two planets to survive. The growth of cities will occupy an equivalent to France, Germany and Spain average area, while there will be more than 2 million people per week.

The scientific consensus predicts a rise of ocean only 1 meter by 2100. It does not consider the release of vast gas hydrate deposits Arctic submarine methane, 30 times more potent greenhouse gas than CO₂, and can raise the average temperature planet in 6th and 12th at the poles. Initiating a global thaw. If thawed Greenland waters will rise 7 meters, if it does Antarctica will be 80 meters ... While other coastal cities is invested in improving squares and public spaces, where everything will start to flood and lose property value by 2050 at the latest.
